

A 6-MONTH LIVE AI PROGRAM · CLASSES 5-10

Teenagers learning to *think* and *build* in the AI era.

A 6-month live program for students in Classes 5-10. They ship 6 real AI projects, take the stage at Flagship Expo Day, and walk out with skills that stay irreplaceable as AI replaces everything else.

Designed and taught by IIT & IIM grads. Built for India.

Hardware included — Arduino, sensors, robotics — shipped to your door at no extra cost.

WHY NOW

The world your child is preparing for *is* being rewritten — *by AI.*

The students who'll lead the next decade are the ones building with AI early — while it's still new ground for everyone. Wingschool is the program that gives your child that head start.

01

AI is the new *electricity*.

It will touch every job your child applies for — medicine, design, law, engineering, the arts. Fluency is no longer optional.

02

Building beats *memorizing*.

In an AI world, the answer is free. The skill that compounds is knowing what to build, and being able to build it.

03

Early starts *win*.

The kids who began with the internet in 1995 led the next two decades. The kids who begin with AI now will lead the next. The window is open.

“The next Bill Gates is a *13-year-old vibe-coding* today.”

Alexandr Wang

CHIEF AI OFFICER · META

THE AI ERA

AI didn't arrive now. It's been arriving for *seventy years*.

What changed is the speed. The last three years moved AI from research labs into your child's homework, your inbox, and every job they'll apply for.

THE EVOLUTION

1956

Rule-based

Computers told exactly what to do — if-this-then-that. No learning, no judgment.

1990s

Machine Learning

Machines start learning patterns from data instead of being hand-coded.

2012

Deep Learning

Neural networks unlock vision, speech, and translation at human levels.

2022

Generative AI

ChatGPT arrives. Machines write, design, and reason in language.

2024+

Agentic AI

AI doesn't just answer — it acts. Plans, decides, ships work across tools.

2026

Embodied AI

AI moves into the physical world — humanoid robots, smart homes, machines that see and act around your child.

WHAT'S HERE NOW

Three kinds of AI your child *will use this year*.

CREATES

Generative AI

Writes essays, designs images, generates code from a sentence. The kind your child meets in ChatGPT, Gemini, Midjourney.

ACTS

Agentic AI

Doesn't just answer — it does. Plans a trip, books the flights, drafts the code, ships the result. The shift defining 2025 onward.

SENSES

Multimodal AI

Sees, hears, speaks. Reads a maths problem from a photo and explains it aloud in Hindi. Tutors that finally feel human.

THE IMPACT

60 days

ChatGPT to 100M users — the fastest-adopted product in history.

Every

major industry — finance, design, medicine, law — is rebuilding around AI.

2030

AI fluency will be what Excel was in 2010 — the baseline, not the edge.

REAL STUDENT WORK

Don't take our word for it. *Look at what they built.*

Every Wingschool student ships six real AI projects in six months — designed, built, and demoed by them. Here's a snapshot from our last Flagship Expo Day.

AARAV S. · CLASS 8 · PUNE

Dadu — a Hindi-speaking AI tutor

Aarav built a voice tutor that explains math problems to his grandfather in Marathi. Used Whisper, GPT, and a custom prompt scaffold.

VOICE AI

PROMPT DESIGN

HINDI

SAANVI K. · CLASS 9 · BENGALURU

StudyBuddy — chapter summariser for boards

An AI app that turns NCERT chapters into flashcards, mind-maps, and quizzes. She shipped it to her whole class and tracked retention.

EDUCATION

RAG

WEB APP

VIVAAN R. · CLASS 7 · DELHI

PetPal — diagnose your dog from photos

Trained a vision model on his own dataset to flag common skin conditions in stray dogs. Local NGO is now piloting it.

COMPUTER VISION

DATASET

NGO PILOT

IRA M. · CLASS 10 · MUMBAI

Verse — a poetry generator in 4 Indian languages

Fine-tuned a small model on classical Hindi, Urdu, Tamil, and Bengali verse. Her Flagship Expo Day talk was picked up by the Litfest blog.

FINE-TUNING

MULTI-LANGUAGE

CREATIVE AI

FLAGSHIP EXPO DAY

Every cohort ends with a public Flagship Expo Day. Your child presents what they built — to parents, mentors, and a guest panel of founders.

LAST COHORT

12 projects · 80+ audience

CURRICULUM

A complete six-month AI program.

Basics to advanced.

Six monthly modules. Six shipped projects. One capstone defended at Flagship Expo Day.
A complete, self-contained program — your child can join at any grade, with no prior year required, and leave fluent in modern AI.

DESIGNED AND TAUGHT BY IIT AND IIM GRADS.

MONTH

01

How modern AI actually works

Training vs inference, the rules-based → machine learning → deep learning arc, and where the field actually sits in 2026. Vocabulary, mental models, and safe-use habits — built hands-on with the same frontier tools real engineers ship with.

SHIPS THIS MONTH

A first working AI workflow, prompted and customized end-to-end.

FIELD LITERACY

FOUNDATION MODELS

MENTAL MODELS

MONTH

02

Prompts as a programming language

System and user messages, few-shot examples, chain-of-thought reasoning, structured outputs, and evals. Prompts iterated and versioned like code, then used on real schoolwork and personal problems.

SHIPS THIS MONTH

A multi-step AI assistant — iterated, evaluated, used daily.

SYSTEM PROMPTS

FEW-SHOT

CHAIN-OF-THOUGHT

EVALS

MONTH

03

AI that sees — vision and multimodal

How images become numbers, classification with pre-trained models, object detection, and vision-language models. At higher grades, CNNs and vision systems built and trained from scratch.

SHIPS THIS MONTH

A working vision system on a real-world problem they chose.

CLASSIFICATION

VLMS

CNNs

DETECTION

CURRICULUM (CONTINUED)

Voice, agents, ML — and a defended *capstone*.

MONTH

04

AI that hears and speaks — voice

Speech-to-text, text-to-speech, multilingual voice models, and the latency budgets that make real-time conversation feel real. A voice agent designed, shipped, and tested in their preferred language.

SHIPS THIS MONTH

A real-time multilingual voice agent that holds a conversation.

STT / TTS

VOICE AGENTS

MULTILINGUAL

REALTIME

MONTH

05

AI that acts — agents, ML, and deep learning

Function calling, the ReAct pattern, embeddings, vector databases, and multi-agent orchestration. Paired with real machine learning — supervised learning at younger grades, neural networks and transformers from scratch at older ones.

SHIPS THIS MONTH

A trained model and an autonomous agent — both deployed live.

TOOL USE

REACT

VECTOR DBS

SCIKIT-LEARN

NUMPY NN

MONTH

06

Capstone + Flagship Expo

One ambitious project that synthesizes the program, system design defending architecture choices, technical writing, and pitching to a panel of senior mentors. Shipped at a public URL. Defended on stage in front of parents, mentors, and a guest founder.

SHIPS THIS MONTH

A defended capstone live at a public URL, presented on stage.

AFTER SIX MONTHS

A child who builds with AI — fluent in the modern stack, *not memorizing it.*

A complete program in itself. Most students stay longer — but even one six-month program leaves them fluent.

WHAT THEY WALK OUT WITH

- ✓ Working understanding of the modern AI canon — prompts, vision, voice, agents, machine learning, and (at higher grades) neural networks and transformers, built in code.
- ✓ Six shipped projects plus one defended capstone live at a real URL — engineered end-to-end, not slides.
- ✓ Real fluency in the modern Python AI stack — the same one used at every Indian AI startup, calibrated to their age.

CALIBRATED TO YOUR CHILD'S GRADE

Same six-month shape across Class 5 to Class 10 — the depth of each module is tuned to your child's age. A Class 5 program is real and complete on its own; a Class 10 program is frontier engineering.

[Class 5](#) Discover · ages 10–11[Class 6](#) Explore · ages 11–12[Class 7](#) Build · ages 12–13[Class 8](#) Engineer · ages 13–14[Class 9](#) Apply · ages 14–15[Class 10](#) Frontier · ages 15–16

MENTORS

Mentors are graduates of **IIT Madras**, **IIT Ropar**, **IIM Bangalore**, and **IIM Ranchi** — most with industry experience at AI-first startups. Cohorts are capped at 25 so every student gets seen and challenged personally.

PRICING

AI fluency, in six months. *Priced for Indian families.*

For most families, the **AI Academy** is the answer. AI Architect is for students already deep in AI; Trial is for those testing the water.

₹999 paid trial · 7-day money-back · No long-term lock-in

TRIAL PASS

RISK-FREE · 7-DAY REFUND

₹999 one-time

Orientation Day + AI Academy week 1 · no auto-renew

₹999 credited to AI Academy / AI Architect if you continue

- ✓ Orientation Day at The Landmark Towers, Kanpur
- ✓ Meet the IIT/IIM mentors face-to-face
- ✓ Full week 1 of AI Academy — workshops, curriculum, AI playground
- ✓ Take home the first project brief
- ✓ AI Academy community + intro call

MOST POPULAR

AI Academy

LIMITED OFFER · SAVE ₹1,200/MO

₹3,799 ~~₹4,999~~ /month

₹22,794 over 6 months

Pay upfront: ₹18,995 (save ₹3,799)

- ✓ Orientation Day at The Landmark Towers, Kanpur
- ✓ Self-paced weekly curriculum + AI playground
- ✓ Hands-on live workshops
- ✓ Monthly 1-on-1 with an IIT/IIM mentor
- ✓ 6 projects in 6 months
- ✓ Hardware kits shipped to your door at no extra cost
- ✓ ₹5,000 in API + cloud credits
- ✓ Portfolio page + certificate
- ✓ Parent progress reports / 2 weeks
- ✓ Flagship Expo Day at The Landmark Towers

AI Architect

LIMITED OFFER · SAVE ₹2,000/MO

₹7,999 ~~₹9,999~~ /month

₹47,994 over 6 months

Pay upfront: ₹39,995 (save ₹7,999)

- ✓ Everything in AI Academy
- ✓ 1-on-1 live sessions with priority focus
- ✓ Personalized curriculum — tuned to the child's pace and depth
- ✓ IIT/IIM mentor available 24/7 — guidance at every step
- ✓ Quarterly senior reviews — progress, gaps, and a roadmap forward
- ✓ Specialization track — ML, robotics, or AI product (months 4-6)
- ✓ ₹15,000 in API + cloud credits
- ✓ Premium AI tool stack (ChatGPT, Claude, Copilot, Vercel)
- ✓ An embodied/robotics module of their choice
- ✓ Custom-domain portfolio (yourname.in)

FAMILY PRICING

Built for families, not just students.

10% off your second child. 20% off your third or more. Applies to AI Academy and AI Architect, confirmed at sign-up — no requirement to enrol in the same season.

NEED-BASED SEATS

Talent first. Cost second.

Bursaries and full scholarships for students who can't pay full price but should be here. Reach out — we'll work it out on the demo call.

QUESTIONS PARENTS ASK

Honest answers, *not sales pitches.*

Will this interfere with school or board exams?

No. We designed the cadence around Indian school life — about 30 minutes of self-paced work a day, plus a 2-hour weekend workshop. Most students fit it around tuitions. During exam weeks, the self-paced layer pauses without penalty.

Does my child need to know coding?

Not at all. We start from zero. The first month is about thinking with AI — experimentation, prompting, scoping problems. Technical confidence grows through making, not intimidation.

Do we need to buy any hardware ourselves?

No. Every project that needs hardware — microcontrollers, sensors, motors, robotics modules — ships free to your doorstep across India. If something breaks during the build, we replace it at no charge. After the program ends, the entire kit stays with your child.

Can I enrol multiple children?

Yes — and the second child gets 10% off, the third or more get 20% off. Discounts apply to AI Academy and AI Architect, are confirmed at signup, and don't require both children to be in the same season. The Trial Pass is already low-friction at ₹999, so we don't stack sibling discounts on top of it.

How is this different from YouTube or self-learning?

Three things: a live mentor who calls them out, a real cohort that creates accountability, and a portfolio they have to ship. Free content can inform — it almost never produces follow-through. We've measured this across 11 cohorts.

QUESTIONS PARENTS ASK (CONTINUED)

More from the demo call — *asked verbatim.*

Who actually teaches my child?

Mentors are graduates of IIT Madras, IIT Ropar, IIM Bangalore, and IIM Ranchi — most with industry experience at AI-first startups. Cohorts are capped at 25 so every student gets seen and challenged personally.

What if my child has already used ChatGPT?

That's a great starting point — but not the finish line. Wingschool moves them from casually using AI to directing it, critiquing it, and building real products with it. Most students who arrive 'already familiar' learn the most from the engineering layer.

How will I, as a parent, see progress?

Three ways. (1) Project deliverables every 3 weeks — actual working artefacts, not grades. (2) A parent progress report every 2 weeks on the AI Academy and AI Architect plans. (3) Flagship Expo Day at the end — you'll watch your child present what they built.

What happens if it doesn't work for us?

Full refund within 7 days, no questions asked. After that, we let you switch plans, pause, or cancel mid-cohort if life changes — and if you paid upfront, we refund pro-rata for the months you didn't use. We'd rather have a happy alumni family than an unhappy paying one.

Is this only for students who want to work in tech?

No — it's for any student who wants agency in the next decade. We've had students go on to bio, design, journalism, and policy. The skill we teach (using AI to build) compounds in every field.
